Summary

Software engineer with 9+ years of experience, including the last 4+ years as a Cloud Software Engineer automating network security and cloud infrastructure at scale. Proven track record taking ownership and delivering high-impact projects end to end. Fast learner and natural collaborator who thrives working with people from every background and discipline to ship polished, innovative, and impactful solutions.

Education:

University of Chicago, Chicago IL
Master's in Computer Science (*Jan 2021-March 2022)*

Barrett, the Honors College at Arizona State University, Tempe AZ
Bachelor's in Computer Science, Minor in Business (*August 2016- May 2020)*

Technical Experience:

Software Development & Engineering: Python, Golang, Java, C#, C++, C, SQL, React, TypeScript/JavaScript, HTML, CSS, Tailwind, REST APIs, gRPC (protobufs), Postgres, Agile Scrum, Waterfall, Jira, ServiceNow
DevOps, CI/CD, & Cloud Infrastructure: AWS, Azure, OpenStack, Docker, Kubernetes, Terraform, Git (Github Actions & GHAS), Jenkins, Ansible, Rancher, Helm, ArgoCD, Postman, Okta, OAuth
Networking: Netskope (ZTNA), Prisma Access (Palo Alto), Alkira (NAT Policy)
AI Tooling: Experience using Copilot, Claude Code, utilizing MCP's, Skills, and Agents to maximize productivity

---

Employment History:

Viasat, Cloud Software Engineer: June 2022-Present
· Served as project delivery lead and lead developer for a team building a GitHub Actions-based CI/CD suite of automations that orchestrates onboarding and management of new FQDNs across Palo Alto Prisma Access and Netskope ZTNA. Delivered this self-service tooling at scale, which enforced consistent security policies and enabled frictionless migrations, in total saving 1,000+ hours of manual work and vastly improving our organization's security standing.
· Created an AI analysis service for ServiceNow and Jira that helps leadership identify automation opportunities and business-wide bottlenecks. It pairs a lightweight JavaScript/HTML frontend with a Python backend integrated with Anthropic's Python SDK, enabling free-form queries of the data through an easy to use chat interface.
· Contributed to a Golang-based, self-service DNS & IPAM REST API tool, using gRPC and protobufs to generate client libraries. Deployed the service with Rancher, Helm, and ArgoCD for scalable, highly available hosting on Kubernetes with consistent, easily recoverable environments, saving an estimated 300+ hours of manual effort.
· Co-developed the TypeScript/React frontend for the above-mentioned DNS & IPAM tool, integrating with Okta SSO, Azure Active Directory, Jira, and Slack.
· Developed dozens of Python, Golang, Terraform, and Ansible programs to automate AWS, Azure, and OpenStack VM operations, on-prem server management, and CMMC policy compliance.

Asher Chaim, Full Stack Software Engineer: May 2017-June 2022

· Designed web-scraping Python programs to collect real estate research data driving enterprise decisions and investments, including automated scheduling and data-cleaning steps that fed a structured SQL database for analysis.

· Designed and built responsive company websites using JavaScript, CSS, and HTML, deployed on AWS and Netlify with continuous deployment from Git for fast and simple updates.

· Helped strategize and execute realtor recruitment initiatives and managed the onboarding of new realtors to the company tech suite.

Helios MI, Quantitative Developer : May 2018 - August 2021

· Upgraded the company's stock/option order system using Java, Spring Boot, and Maven, simplifying order entry for traders and adding guardrails that blocked misconfigured or overly risky trades before submission.

· Collaborated in the development of several derivatives-based strategies with experienced traders, gaining a strong understanding of stocks and derivatives, as well as Java and C# which these strategies were most often written in.

· Developed an extensive JUnit testing library for strategy risk evaluation, along with a backing Hibernate and Postgres database layer to store and replay trade scenarios, improving confidence in strategy changes before deployment.
